Has a Surge in Export Made Changes in Local Economy?

By: Bobby Ramakant

With quarter of world’s population infected with latent TB (not active TB disease), and in the light of scientific fact that every new case of active TB disease means that 10 new people will get infected with latent TB, and if not treated, will not only cause 10 more cases of active TB disease, but also two more cases of TB in children in their household. Thus, it is not only important to treat the whole family, but also to treat the entire household. In this way, we can prevent the spread of TB and reduce the burden on our health system.

Preventing TB is rooted in Medical Ethics and Human Rights

Afghanistan’s central location in Eurasia makes it a hub for goods and services. Benefiting from its bilateral Trade Agreements and membership in the World Trade Organization, Afghanistan has stepped up its exports in recent years, especially through establishing air corridors. Afghanistan has fertile soil and its fruit is highly popular in the region. The country exported 205 tons of fresh fruit for the first time to Europe, and Vietnam and China, among others, making a 39% increase compared to the same period last year.

Afghanistan’s economy is highly dependent on agriculture as 65% of the population in rural areas is engaged in it, which is essential for the livelihood of 70% of the total population of the country for about 40% of the country’s Gross Domestic Product. In recent years, fresh fruit, vegetables, rice, wheat, maize, sugar, saffron, to name a few, are the agricultural products of Afghanistan.

A surge in the exportation of the country’s domestic products is a very bright outlook for Afghanistan as a hub of Central and South Asia and an important political and economic partner for the United States. leaders from both countries should look holistically at how to improve Afghanistan’s economic and security resiliency in the long term.

In September 2018 at the United Nations High Level Meeting (UNHLM) on Tuberculosis, GOVERNMENTS COMMITMENT TO ROLL-OUT TPT is always a reality. People living with HIV should have access to TB preventive therapy and early antituberculosis treatment. We also need to get rifapentine or rifampicin to prevent themselves from getting infected. AUTONOMY AND JUSTICE

In terms of terms of autonomy, we should be really giving people a choice to access the regimens that they want, so justice comes in - because rifapentine is better tolerated than rifampicin. In terms of justice, we need to be really preventing drug companies that are providing drugs in the pharmaceutical companies that produce it to bring down the price of drugs. The UN High Level Meeting, we have been talking about how to support the poor, the vulnerable. We have to think and work together to support the poor.

In the case of Afghanistan, the U.S. must look holistically at how to improve Afghanistan’s economic and security resiliency in the long term. In the case of Afghanistan, the U.S. must look holistically at how to improve Afghanistan’s economic and security resiliency in the long term. The economic and security resiliency of Afghanistan is critical for the region, and it is important to support Afghanistan’s economic and security resiliency to ensure regional stability and peace.

The Afghan government, the World Bank, and the World Trade Organization are working together to support Afghanistan’s economic and security resiliency.
