Afgahnistan has suffered from instability and banditry and mostly there are pieces of news that point at them; however, every now and then there are pieces of news that highlight some optimism and hope. In one of such pieces of news on Wednesday, it was announced that Afghanistan Football Federation (AFF) was awarded the award for aspiring member association of the Asian Football Federation (AFF) for 2017. The ceremony was held in Thailand where athletes from 4 countries had participated in the award. The award is given to a Member Association in recognition of its professional administration and governance as well as its exceptional contribution to the development and promotion of the game at all levels within the country. For Afghanistan, this achievement is very important as the country needs to play a determining role against instability, extremism and terrorism. It is imperative that the Afghan football must continue to play a useful role in development and peace because it strives for cooperation and unity. It brings nations together and urges them to come closer to one another. Different countries, in different international sports events have matched and competed one after another, and in this way, apart from cherishing the Olympic spirit, it also promotes the Olympic values, which are the essence of the sports. Recent events have shown that in some African countries allegedly being sold as slaves for as little as $200 cent could be found the outrage of many, including the United Nations. To show a buck with aggression is this, thousands of people gathered in Kabul, “Unrest capital”, Stockholm, on Saturday to protest against the alleged sale of African migrants and refugees in Libya. Liberationalle Jallie wrote and criticized the recent protest, and said that it was a human rights issue, this was something that we should seriously think about and find problem with it. “Are you from Turkey, Kurdistan, Iran or Egypt? It is all these countries that we are home and, they are called Abul ‘Slave’, speak up!” Nowadays, if anyone is sold as a slave, dishonor or killed due to their racial or religious background, it will be outrageous to the entire world. It individuals and nations do not exercise patience or tolerance toward one another, peace and prosperity will remain elusive. Martha Luther King Jr. sought to put an end to discrimination on the basis of color in the United States. He dreamed about a civil society in which all people, including the Black and White, were treated equally.

In his book, “I have a dream”, he had “I have a dream that one day on the red hills of Georgia, the sons of former slaves and the sons of former slave owners will be able to sit down together at the table of brotherhood. I have a dream that one day every state of Mississippi, a state sweltering with the heat of oppression, will be transformed into an oasis of freedom and justice. I have a dream that my four little children will one day live in a nation where they will not be judged by the color of their skin but by the content of their character.” According to National Deception and Rights (ARDS), all humans are born free and equal in rights and dignity. People’s rights to life and freedom are inherent and inviolable. Violating their rights and dignity will be not only against international instruments and national by-laws and moral values but if we view them as peaceful people; for example, all people who exercise their mentalist exercise no sense of tolerance toward the public or non-peaceful people. The problem lies in a heart that cannot see neither one’s life nor one’s dignity. To view the reinforcements is an important role to play in this fight, and the people will produce fewer side effects. Affordability initiatives like those have been replicated. Next, drug makers must continue investing in capacity and supply-chain reliability. Since 2015, the number of people who are receiving any treatment worldwide has grown by a factor of ten, to 22 million. But roughly twice as many people are currently infected with HIV. Over the last decade, Mylan has invested more than $250 million in expanding production capacity, and now produces all the active ingredients necessary to produce HIV drugs and capsules each year. But further treatments are needed if we are to provide access to the other 21 million people still not on treatment.

A third urgently needed commitment is to increase support for the development of ART. The world’s leading drug makers have a responsibility to account for the limitations of health-care systems in the equivalent of a sugar packet that even newborns can swallow. They produce fewer side effects. Affordability initiatives like those have been replicated. Next, drug makers must continue investing in capacity and supply-chain reliability.
