The Faculty of Wonder

By Dilawar Sherazi

Thoulessen thousand of evolution humans beings have learnt from the past. They have seen the mistakes done in the past and they have welcomed the changes. This have led them in finding answers to some major questions that cover the facts about the past. They have seen that the forces of nature and the forces of human beings meet at the moment of the fusion of human beings’ origin, the life story has been one of huge basis motives. They have welcome forces that works and translated him the most in achieving this motive is undoubtedly the capacity to adapt through time. Today evolution become the new position and knowledge and that they have collected had not sedimentary, implied in their beneficial thinking.

It was the human faculty to wonder that took them to the doors of philosophy and it was the philosophical questions that solved some of the very basic questions about human system and about the universe as a whole. It then culminated into science and then the scientists took the difficult task of running after the truth. However, the role of the philosophy and philosophers is still very much imperative as there are many areas that can never by touched by science but philosophy has made this possible.

And, it is philosophy that supports the faculty of wonder and appreciates human beings to be the most significant in their search for the truth. Unquestionably, there are authorities and teachings that have seen the doubting attributes. Unfortunately, they have no evidence to back up their claims. The only one that will lead human beings away from the darkness and load their soul with the light of knowledge and to lead them to the path that can never much to some destruction. They on the other hand favor blind beliefs. Their arguments seem to have some strength but not enough to back up the address the exact issue. If questioning, as they believe, does not necessarily lead to the sound or may even lead to infinite path of questions, now satisfied human beings would have to know the truth through this and without asking any questions? Can anyone, who is totally convinced with the knowledge that cannot go through the simple test of their thinking and their natural curiosity? And what can human beings hold on the beliefs that may be totally wrong? Inaccurate knowledge may not compel human beings to go multi-faceted against others and may not make them others follow their thinking, but beliefs, whether right or wrong, will compel the believer to follow them. And that is simply what people believe about themselves. Those who possess blind beliefs are, as a matter of fact, deprived of the true awareness of life. They are the ones who themselves have locked their minds for a cause that they do not want to be exposed or else they can harm themselves. Nothing is able to change such people as they are not open to any change in their way of thinking and cannot do something that is unknown to their own.

If each person even go to educational institutions, there is no reason that they would appreciate, they may be the same with themselves their dogmatic belief.

It is also important to note that the type of education the educational institu- tions is disseminating in the present time is a big challenge. The educational insti- tutions have become the factories, where robots are generated. The students cannot think on their own and cannot function as human beings into the society. There is no room for doubt and questions in our educa- tional institutes. They have to be the faculty of wonder and ask questions are punished in the second way. Such institutions can only produce students that get to educate their generation, and uneducated. These are the people are the most suitable for our society and most educated for our social education schemes. However, there is more people are poor in this way of education but themselves do not know the importance of their teaching. They really existed that many of low empathy for life and thought generating system education. The onerousness are being made to keep the young, and capable minds away from the food that can nour- ish them and make them discover, universe and their mysteries.

True education can even reduce hatred in the hearts of the young and teach them the lessons of love and brotherhood for the fellow beings. In fact, there are some people who stare to keep or pull education away from young. Thus, if an educational system would generate meaning views and perspectives which can even unreal the realities that they want to keep as a secret. This kind of education should be implemented on some selected people by trying to learn how to live with different ideas and thoughts. Otherwise, without a proper education and which means that they feel they and need to make others that can be right as well. They even need to go deeper and assume that there are many ideas that have already been thought about and from that the people can come to know the mixture of the mistakes in the history and know the real truth. Our facts should be unexplored from following the linked beliefs. They have to be the freedom of thinking free and their faculty of wonder must be moulded. Only young people have the right of getting education who understand that they can doubt and challenge what is already known and seen if the better alternatives be available and what is seeming through their own minds. The educational institutions must first of all work on these ideas and then the students can be satisfied with them. They should not be the places the students are spoon fed. It has to be understood that if the educational institutes are able to generate an environment where the students can come to think and try to touch the knowledge that is already out there to able to the students or else to force or punish the students to learn they will learn themselves as they can. The idea is that there are no boundaries.

The Afghan government needs to heed the assessment and start to stabilize the country. However, the Afghan government remains unprepared for the upcoming fighting season. The group is more powerful now than they were in previous years. The Afghan government needs to be fully prepared politically and must be fully prepared on the military level as well. For the Afghan government needs to prepare for the upcoming fighting season. While we used to witness a lull in the fighting in previous winter seasons, the insurgents are waging a bitter campaign in Afghanistan. The offensive by the Taliban is an indicative of intensity of their upcoming fighting season. The group is more powerful now than they were in previous years.
