Avalanche Turned Death Claim Amidst Government Negligence

February 26, 2015

Afganistan recorded variant quantity of snowfall this fall, this year. Nonetheless, Panjshir and Badakhshan are among the provinces that witnessed record snowfall last month. In Bamiyan province, for instance, the heavy snowfall that resulted in snow avalanches hitting different villages in central Panjshir province resulted in several casualties with scores gone missing. According to public officials, at least 24 people were killed and 30 others were injured.

Avalanche, also known as snow slide or snowroll, is a rapid flow of snow down a steep slope. Avalanches are typically triggered in a rapidly stored in some cases due to a mechanical stress in the snowpack when the forces on the snow exceed its strength. The load on the snowpack may be only due to gravity in which case failure may occur either from weakening in the snowpack or increased load due to precipitation. Avalanches occur in this way are known as spontaneous avalanches. It is estimated that spontaneous avalanches might have been behind the tragic incident. The ground sources assert the people gone missing might be buried, unobserved, diminishing the chance of their survival. The reservoirs damaged has given a handy approach in put into practice to safeguard the trapped civilians.

Since the snow has left the district centre completely/partially disconnected from the affected villages. It gets hard to supply the troubled area with need machines and humanly ability. The people at the scene are now using shovels to recover these loved ones lying deep under the thick pile of snow. This clearly is reflecting the gravity of problems and its aftermath burdens to deal with situation.

The avalanche, the government quick response seemed minimal, even the aid and rescue operation could not begin. It was later reported that the government had taken measures to deal with the situation by deploying personnel and services to the site. This was a testament to their seriousness towards the affected populations and their welfare. The government had also sent teams to the affected areas to assess the situation and ensure that adequate measures were taken to deal with the crisis.

The tragedy, however, showed the inadequate preparedness and response capacity of the government and the need for improved disaster management systems. The incident also highlighted the importance of early warning systems and the need for effective communication between different agencies involved in disaster management.

The tragedy underlines the need for improved disaster management systems and the need for effective communication between different agencies involved in disaster management. The incident also highlighted the importance of early warning systems and the need for effective communication between different agencies involved in disaster management.

The government has announced that relief aid will be provided to the affected areas. However, the effectiveness of these relief efforts is yet to be seen. The government has also expressed its condolences to the families of the victims and assured them of all possible support. The incident has also led to fresh calls for improved disaster management systems and the need for effective communication between different agencies involved in disaster management.
