Taliban Impose War on Afghanistan

By Hujjattullah Zia

With the appointment of Mawlawi Abdullah Alhamed, who is known for his radical stance, as Minister of Defence, Afghanistan has turned a page into a new era of war. The military offensive against the Taliban has been launched, and the casualties are mounting.

The country's water sources are heavily dependent on annual rainfall and snowfall. But poor government policy has severely hampered the use of the country's water supply. Climate change and drought are also severely affecting water supplies. Climate change is reducing the water available in the ground and the surface, and the water is becoming scarce.

As a result, the water supply is vulnerable. The government should urge the international community to increase its support to Afghanistan. The government should also work to improve the quality of water supplies in the country. It is a matter of survival for the people of Afghanistan.

But the situation is only worsened by the lack of proper management of water resources. The government should work to improve the management of water resources in the country. The government should also work to improve the quality of water supplies in the country. It is a matter of survival for the people of Afghanistan.
