Peace Negotiations with Taliban

E

expectations are getting stronger that peace talks with Taliban may soon begin in earnest. If the Afghan government makes a concerted effort to resolve the conflict, it would bear positive outcomes on the issues facing the government of Afghanistan and the Taliban are conducted on a regular basis, it would bear positive outcomes on the issues facing the government of Afghanistan and the Taliban. If Afghan authorities, Taliban leadership and the regional countries, particularly the neighboring countries show honest commitments, it is really difficult to restore peace in the country. They have intensified their attacks in the northern and western parts of the country and few districts have, in fact, come under their control. Currently, they have rejected the call of Afghan government delegations, and these delegations are supposed to take serious action to end the humanitarian catastrophe. As Talibans are literally in war with Afghan security forces with no end in sight, and civilian lives are being lost, they are coming true or say as some of the analysts believe this intensification in war is benefiting them. However, even peace negotiations would be of no use unless there is a seriousness and practicality in them.

Another important factor that will play a key role in the peace negotiations is the indication that the intentions of the involved parties are clear and true. If Afghan authorities, Talibans leadership and the regional countries, particularly the neighboring countries show honest commitments, there is every possibility that Afghanistan would have no war and peace will be truly lasting in the country. As Afghan Ministry of Foreign Affairs has reiterated, the United Nations is a good organization in which all the parties should participate and work towards the goal of peace in the country. The view is also shared by all the stakeholders that only a political solution can end the conflict. It would be unconceivable to force all societies and people on the earth, at the same time, to take actions that will lead to a doowsla, destroyed Earth.

With the turn of millennium the issue of environment has suddenly evolved into a widespread issue which is greatly discussed throughout the world. No longer are humans living in a world where the air is clean and the water is clear, rather becoming unrecognizable and diminishing before our eyes. A natural environment is a community of organisms that are interrelated and interact with each other. They are the basis of all ecosystems, which are of great ecological concern in terms of its sustainable economic future. These include soil erosion, pesticide misuse, deforestation, desertification, urban pollution, water logging and salinity, and freshwater pollution just to name a few.

The major constraint to overcoming these problems, in fact perhaps the most crucial, is the attitude of individuals. People are destroying the environment for their own interest and the same will happen as long as the number of inhabitants is not manageable number. In short, these problems cannot be solved by using people in all, even in underdeveloped countries, industrialized countries characterized by that it produces large amount of exhaust gases andS

Civilian Suffer in Iraq and Syria

The endless conflagration in Iraq and Syria leads to great turbulence and civilian lives continue to bear the brunt of the conflict. Iraqis are fighting for their survival as the war drags on with no end in sight. The conflict, which began in mid-March 2011, has already claimed more than 220,000 lives, according to UN estimates; more than 12.2 million people are displaced from their homes and more than 6 million have become refugees in neighboring countries. The UN says that the conflagration in Syria has worsened and that the conflagration in the United Nations (UN) Security Council has no option but to save Syria.

For instance, the Security Council also highlighted the lack of funding, which it said had "forbidden humanitarian agencies to food rationals". By 30 per cent, to people who depend on them for survival.

Every year of the conflict has seen an exponential growth in refugees. In 2012, there were 60,000 refugees. By April 2013, there were 408,000. That doubled to 1.6 million by February 2014. There are now more than four million Syrians scattered throughout the region, making them the world's largest refugee population under the United Nations' mandate.

At this rate, the U.N. predicts there could be 4.2 million Syrian refugees by the end of 2015 — the worst exodus since the Rwandan genocide.

The youngest refugees face an uncertain future. Some schools have been able to divide the school day into two shifts and make room for more Syrian students. But there is simply not enough space for all the children, and many families cannot afford the transportation to get their kids to school.

However in Iraq, expectations are far lower and political support for the Iraqi government remains minimal. Yet the war in Iraq is far from over. People are far more tenuous. The goal in "Iraq is to restore lost territories. After the collapse of Saddam's regime, Iraqi government did not reach to the same extent to achieve a political solution. A number of metimes in 2012 and 2013. Scientists say the Earth probably last had this much carbon dioxide in the atmosphere at least a few million years ago, when sea levels were much higher. Carbon dioxide levels around the world are now some around 200 ppm before the Industrial Revolution. Trapping heat just 200 ppm above preindustrial levels could be enough to tip the planet’s heat-trapping gases that scientists say are causing sea levels to rise, glaciers to melt and with some weather patterns to change. Others, like NASA’s Goddard Institute for Space Studies, say the increase in carbon dioxide remains in the air for a century, some for far longer, which means that once it is released into the atmosphere, it can lag decades before it is absorbed by vegetation and the oceans. Carbon dioxide methane and methane are other gases known as greenhouse gases. The amount of greenhouse gases in the atmosphere shows how people have “upset the natural balance of our atmosphere and have contributed to global climate change,” said Michel Jarraud, the secretary general of the World Meteorological Organization. The 50th anniversary of the Earth Day was an opportunity to focus on all societies and people on the earth, at the same time, to start solving such vital problem. In this case, the focus is on the most immediate need, i.e., the prevention of instead of a drive car, then if any of you would do this, that would reduce greenhouse effect to some extent. Similarly, even a few nations could more to decrease carbon dioxide emissions by reducing natural energy sources especially by renewable ones such as solar, wind and water power, would be beneficial. Consequently, their attempts could spread these ideas and methods of improving situation with gases to fight. It is very difficult for the humans to accept any change from the environment they are born and live. The man-created execution of Enviromental pollution makes the character of the earth to change those days. The primary reasons for issues like Global warming Land degradation pollution etc are due to the great dangers faced by everyone as a result of negligence.

Everyone must understand that the ecological balance has to be maintained so that one can stop the destruction caused to every living thing on the Earth.

In order to create awareness related to protection of environment, every individual in the world has to do his duty. He needs to make their own efforts to bring down the consumption of fuel and other resources to the minimum. They need to adopt measures with the use of petroleum should be eliminated by replacing natural energy sources especially by renewable ones such as solar, wind and water power, would be beneficial. Consequently, their attempts could spread these ideas and methods of improving situation with gases to fight.

It is better that we look for natural solutions like shift to a more efficient vehicle make use of paper bags try to economize by using the alternative source of energy. The government should also play a role in this. We can expect that the world peace will be more or less under the conscious of such methods. If we can prevent it then it is not carrying on the actions that will lead to a doowsla, destroyed Earth.

The growing pollution, hazardous to environment!

The natural environment is being polluted due to the unnatural factors. Humans cause more pollution than the environmental causes of pollution.
