KABUL - The Independent Election Commission (IEC) said on Monday it was purchasing 25,000 biometric devices to be used in the September 28 presidential election.

The Independent Election Commission (IEC) acting head Haseebullah Khalimzai said the EIC was“The biometric system for the presidential election has been finalized and the commission has purchased 25,000 devices,” said Wolesi Jirga secretary Abdul Qader Zazai.

The IEC said it would use the biometric system to prevent double voting and ensure transparency in the election. The commission also announced that the biometric system would be used in the upcoming local elections.

The biometric system, which is being used in the presidential election, is expected to be used in the upcoming local elections as well. The IEC said it would use the system to prevent double voting and ensure transparency in the election.
