It is necessary to understand that the issue of smoking is a grave matter. According to the statistics from World Health Organization (WHO), there are more than one billion smokers around the globe, and one in five of them is under the age of 18. It is estimated that 90% of these smokers will be from low and middle-income countries. Smoking causes various diseases and can lead to preventable deaths. It is essential to address this issue seriously. As some of them, themselves, smoke and do not realize their percentage must be very high as the places where they work between the ages of 13 to 15 smoke in Afghanistan. If this is the situation. Afghanistan's Ministry of Public Health (MoPH), has on Afghanistan is also one of the countries where tobacco consumption is very high and people are not aware of the dangers of smoking. The government has implemented various measures related to the tobacco supply chain, with the aim of reducing the illicit trade of tobacco. Heightening the tax rates on tobacco can be an effective measure to control smoking. However, there is no doubt that the illicit tobacco trade is a significant problem in Afghanistan. It is estimated that 40% of the tobacco consumed in Afghanistan is illicit, which undermines the efforts of the government and the world health organizations. Therefore, it is essential to address the issue of smoking in a comprehensive manner to ensure public health and well-being.
