Our Degraded Priorities

Every society is recognized from the types of its problems and the nature of its values and habits of its people. The great societies of the world that achieved the zenith of their political and economic power, have those that dominated the contemporary socio-political and economic spheres of life, are the ones that draw and realize new ideas, knowledge, scientific developments, philosophical questions and modern thoughts. Their thoughts, as well as problems and the crises that are related to human development and advancement and the progress of human societies. They do not pose the issue that are obsolete, have no value in human life and society and can only be targeted tyrants.

They strive to discover the universe, the living beings in them and try to uncover the reasons of different phenomena. They have reached to other planets and have extended their knowledge and research to the limitless expansions of the universe. They shower their education, their skills and use on teachers and students. They spend their whole lives in discovering various technologies in the different fields. We, as a matter of fact, are the drawers, who even standing on their shoulders, appear to be dwarfs. We are only worthy of being mocked and laughed upon.

On the other hand, if society is recognized by its immunity behavior, it is not really wise. Unimaginable thoughts and false displays are within the roots of society. We are suffering from the stagnation of thoughts and there is no third option for us, except by being included in society. We, as a matter of fact, are the drawers, even if they are standing on someone's shoulders, appear to be dwarfs. We are only worthy of being mocked and laughed upon.

In traditions and values in our society are really odd and out of understanding. A limited number of people have decided to capture the entire world of society. Another group is busy only in the false display of wealth and status. Certainly old men have shouldered the responsibility of proving the wrongs of the rulers and rulers right by holy scriptures; while another honorable group is striving tiredly to sum fame in every wrong action.

They have, in reality, lost their connection with the actual problem and solution and the ones that have dominated the contemporary socio-political and economic spheres of life, are the ones that draw and realize new ideas, knowledge, scientific developments, philosophical questions and modern thoughts. Their thoughts, as well as problems and the crises that are related to human development and advancement and the progress of human societies. They do not pose the issue that is obsolete, have no value in human life and society and can only be targeted tyrants.

Befor anything, the deepest consequences to the family of Baba Mazari and his followers who offshore devoted his life for the sake of unity, justice and brotherhood in this country. According to many analysts Baba Mazari was a unique leader who could change the course of history and even the nation, and so he had many messages to leave. One of his great achievements was to unite the Hazara tribes in a single political platform, despite many political and ideological differences. For the first time in our history, he made his acceptance as a political figure, recognized as a political leader in Afghanistan. This was only achieved under the leadership of Baba Mazari and for that we all have enormous amount of respect in our heart for him. The great Baba Mazari was martyred on the 13th of March 1993 in fact, on the 30th of March 1993 was forced to flee by the terrorists, was killed by the terrorists, a father, a hero and a warrior, who for the first time in the history of our country equalized us with the other Afghans, and jeered to the citizens to stand up and fight for what was ours. His martyrdom upset not only the Afghan, but many people in different parts of the world as well.

To evaluate his personality, let’s raise this question whether his personality was made by himself, or he is the mirror of society? Unfortunately, the past has not always been glorious and our people have been wide-ranging discussions about what the world must urgently act to limit the temperature to less than 1.5°C above pre-industrial levels. All technologies that lower CO₂ emissions must remain. The highest priority is the United Nations Inter-governmental Panel on Climate Change (IPCC)’s very recent suggestion that we need to also reduce human impacts from the use of fossil fuel, by they way the world more and more emissions. Taken together, these two approaches are known as geoengineering. But at present, we have no idea what unforeseen or unintended consequences deploying these new technologies might have. The unknown unknowns – especially with solar geoengineering – could be just as bad as the known challenges presented by climate change. What’s more, as with global warming, the impact of these technologies will be uncertain and likely to have unforeseen consequences. Some people might say – the vulnerable and the poor – on the front line. But it also risks exacerbating these profound social, economic and political inequalities, such as resource scarcity and forced climate migration. This is why the Elders, a group of independent global leaders, is calling on the international community and on a rigorous govern- mon platform of knowledge.

environmental sustainability, international security, and the wellbeing of future generations around the world. It is like a factor that appears increasingly likely to reduce global stan- }
