A 477km 500kV alternating current transmission line from the central areas of Turkmenistan to the Northeastern area of Pakistan (4,500MW) will be built. The line will pass through 3 provinces of Pakistan (Hangu, Sibi and Kalam) and will have a length of 450km. 

The project is expected to be completed by 2021 and will provide a significant boost to Pakistan's energy security and economic growth. 

The agreement was signed by랛I, the Minister of Energy and Water Resources of Turkmenistan, andยูK, the Minister of Energy of Pakistan. The agreement was witnessed by the Prime Minister of Turkmenistan and the Prime Minister of Pakistan.

The agreement includes the construction of a 500kV transmission line from the central areas of Turkmenistan to the Northeastern area of Pakistan, with a capacity of 4,500MW. The line will be built in three stages, with the first stage expected to be completed by 2021.

The agreement also includes the construction of a 500kV transmission line from the central areas of Turkmenistan to the Northeastern area of Pakistan, with a capacity of 4,500MW. The line will be built in three stages, with the first stage expected to be completed by 2021.
