I ideological Differences
Facilitate Military

By Hujjattullah Zia

Emergency stems from ideological differences and people fall victim to violence and bloodshed on the grounds of their racial, social or sectarian differences. On the other hand, those who are born to be a particular geographic location with certain color and creed, is treated as parasitic in the perspective of some ideologies, with the result that they are treated differentially among people and races and creed. Now, a number of individuals reject this trend of making the society a victim of the violence of the world, mainly in Afghanistan, for their accidental backgrounds.

Although, people share common feelings, social standards and cultural norms in a society, a number of individuals tend to make the world a paradise for their same feelings and facts of models, acts/actors, singers, etc. to the detriment of their cultural heritage and moral values. In another item, they are alienated from their cultural values and adopt liberal values. On the other hand, however, some are in a close structure and form a set of fundamental mindset. They claim to practice the very perfect school of thoughts to flawlessly rule and regulation believing their cultural values. Hence, the cultural values, owing to the vicissitudes of ideas are under the protest of moral erasure. Based on this false assumption, they justify their acts of violence and trample upon the rights and dignity of the public. So, the second group does not only step out of moral restrictions but break the state law flagrantly – which is considered crime and lawbreakers are to be prosecuted. Now, the question is that why some individuals, unlike many others who live in the same society and share the same culture and tradition, choose to break moral standards and even state law?

There are some reasons for this fact. Lack of social control is one of the contributing factors which pave the grounds for perpetrating violence, while in the west, a large number of people believe in shared values and accepted norms, nonethe-
less, they are inclined in transgressing moral values and ignore social requirements. This is because the laws of society are liberalized by the government. Similarly, differences in values which originate from the different cultures and geographic features discriminate others. For instance, apartheid in South Africa was a major blow for the Black. The White enjoyed all facilities and had a sense of superiority over those who were Black and were deprived. Normally, those who were not entitled to the same opportunities as others in their surroundings will show an inclination to perpetrating crime. Because the layered divisions of the society are accumulated in some ways and their rights and dignity are not held upon and the society is not composed of a liberal or radical, ethical and code law and will be meaningless for them. Likewise, some individuals sometimes do not a group accept the laws and regulations. However, they may try (x,y) to seek their gain in doing some possible way – be it at the cost of breaking moral values, law or violating the rights of others.

Moreover, it is believed that man is not born criminal and inclination to violence is not inherent in his character. Attempts and actions are not natural or congenital. One acquires their criminal charac-
ters through environmental circumstances. In other words, deviating from the social path is a process rather than happening suddenly or being an impromptu case and one will get this characteristic through interacting with others. When one socializes in a criminal environment and interacts with crimi-
nals, then in a way, he will learn in the process of time. It is worth saying that media also play a crucial role in imparting people to be tempted to positive or negative attitudes. As a result, the changes that media have brought in our country within the last decade are easily tangible. A large number of youth, includ-
ing male and female, have adopted the styles of foreign countries which are mostly in conflict with our cultural values and social norms. They have been applauding the media, which has been maintained in a political code since foreign cultures have been diversified through serial and amusing films. The same is the case with the fundamental groups. They have been using the media and have been socialized in a close structure, they cherish radical ideology and show no inclination to follow the public practices. Socializing in the hotbed of terror, lack of social control, interacting with radical and intolerant individuals, being deprived of enjoying an appropriate social atmosphere and living in a bad society, etc. are some of the mentioned ambitions, are all the factors that have forced a number of people to the path of violence.

The world should eliminate the hubs which have changed into hotbeds of terror and domestic terrorism. The countries which have been subjected to a change of ideology and have been introduced the reaching-zero emissions in the second half of the century. Since they are born and bred in radical environment and social-
ized in a close structure, they cherish radical ideology and show no inclination to follow the public practices.
