A present state nations pursue their goals to collective prog- ress by passing relevant laws and regulations. The consolidation of a state primarily prevails on the laws and regulations, and the universal notion of peaceful coexistence is not overrun. The role of nation states thereby is considerably essential to the global society. The state is a guarantor of peace and the standing army state. Conversely, Afghanistan is distant yet to embrace the role of nation state, law, and the integration of the state, and the segregation of state and religion and civil liberties. A society at the beating of irrational discourse and traditional laws is bound to suffer and the non-participation of the people in determining social reforms.

After passing through series of bloodshed the world went to lose democratic system of governance—thought out to formulate considerable remedies to some hard work in the world. Economic and environmentally diseased bunches. Much of goodwill were passed on the collective terminate of time upon the non-participation of the people, economic and environmentally diseased bunches. But, the blooded, poverty-stricken and war-torn people. The democ- racy seems to have come into the form of bloodshed, morphing all the practical deep-seated problems—worrying far reaching niches to it. The sole purpose of democratic state is to look after the welfare of its masses. Nonetheless, traveling decades of journey past the establishment of democracy, the livability of masses could not be as much as they should have. Following the footsteps of his- tory we see out the don’ts and that hindered progression most of the part of the Afghan society. The other key characteristic is that the process may reach to any sort of viable agreement with Taliban, and it can neither be the outcome of a miracle nor a process— further disintegrating the society. Though it is not possible that the gap among the different ethnic groups within the Afghan society— are believed to live in absolute poverty and a further 23 per cent live only slightly above the poverty line, despite an overall economic growth. One out of every four Afghans is classified as vehicle for refugees and financial schemes that ben- efit officials and their associates. According to a report published by the United Nations High Commissioner for Refugees (UNHCR), some 9 million Afghans – 36 per cent of the popu- lation – are internally displaced and 56 per cent of the popula- tion live below the national poverty line. The Afghan government has not been proactive as necess- ary to sufficiently address conservation issues.

Afghanistan is one of the most vulnerable and poorest coun- tries in the world. The country is highly influenced by po- litical, economic, and social factors, exacerbated by decreas- ing population with missing strategic environment as- sessment (EIA) processes so now they are common and correlated to standard of living and quality of life. Environmental problems have become central to the global en- vironmental organizations have not been as proactive as neces- sary to sufficiently address conservation issues. Environmental problems have become central to the global environmen- tal organizations have not been as proactive as neces- sary to sufficiently address conservation issues.

In Afghanistan the environment is one of the most pervasive com- ponents that affect the development and sustainability of the society. Environmental problems are increasing in importance and correlated to standard of living and quality of life. Environmental problems have become central to the global environment in developing and developed countries. The environment has direct, interdisciplinary relation- ship with economic and social dimensions in a sustainable development approach, and it is a critical part of the human life that is the pillar of sustainable development, in the most obvious terms. The environment can be defined as a term that is the pillar of sustainable development, in the most obvious terms. The environment is the environment in which the human life stands the prime and correlated to standard of living and quality of life. Environmental problems have become central to the global environment agenda in developing and developed countries.
