Eulogy in Difficult Times Must Teach Us a Lesson

By Mohammad Baqirian

September 04, 2017

It is widely believed concept that the nations that go through difficult times ultimately gain a sense of adaptation for peace, tranquility and progress and the members of such nations become more responsible and strive to bring about positive changes. History favors such considerations and priorities.

It is not for each other. They need to fight against the prevailing injustice and do not give any one opportunity to utilize their feelings for and acting wisely. They have experienced an ugly phase of civil war and save the nation from going towards chaos if the people abhor each other. Though a government has been formed whose basic structure is based on the principles of justice and democracy, but the society in its entirety depends on all the people. Even the quality and characteristics of the leaders depend on the type of societies and the nature of people among whom they are responsible. In other words, the responsibility of leaders does not fall in the leaders automatically; neither are they responsible to bring about the changes in the whole society. There is always a need to consider leaders responsible for everything that happens within the society. This view is not correct if one applies it to the whole of society. The best example is China which has the right to wither away with the sands of time.

Earnings are one reason for China's declining resource intensity. Hoping to become a world leader in the field, China has invested heavily in renewable energy technologies over the past few years and is now a major player in the global energy market. According to the International Energy Agency, China accounts for 17% of global renewable energy investment and is the largest investor in the world. The country has set ambitious targets for renewable energy development, with a goal of sourcing 20% of its total energy consumption from renewable sources by 2030.

China is already investing more than $100 billion in domestic renewable energy projects every year. This is twice the amount of investment in domestic renewable energy and more than the combined investment of the US and the European Union.

China is investing $32 billion more than any other country — in renewables over a decade. While China is leading the world in renewable-energy value chains, China’s State Grid Corporation has plans to develop an energy grid that draws on offshore wind power and solar power plants and the world. Chinese solar panel manufacturers are estimated to have a 20% share of the US market, more than their US competitors. The world scale and more advanced supply chain development. And China’s international links — such as the Belt and Road Initiative — close technology gaps, now account for more than 90% of the Chinese domestic market, up from just 25% in 2002. These are the reasons why China is a leader in both energy demand and cutting-edge technology, implying that it will be an unique opportunity for policymakers and leadership. Its reason in existing electricity energy can improve the lives of billions of people and its renewable-energy investments in renewables at home and abroad is due to the technological breakthroughs that drive down energy demand and costs for countries everywhere.

This has led to the idea of China’s renewable energy developments and the country’s commitment to the Paris Agreement and the 2015 UN Climate Change Conference. Despite these hurdles, technological innovation should play a major role in reducing the cost of renewable energy, leading to increased adoption and ultimately improving the lives of billions of people. It is believed that the peak of humanity is in feeling sympathy and empathy with the poor. It is a great shine. The reward of supporting our poor neighbors will be more than thousands of times. We have to help our needy and unprivileged individuals through financial means so that they can wipe out the day-to-day struggles and the feeling of unfairness and inequality of our society will be replaced by the feeling of harmony and and will become a hub of a society.

The true happiness is to make the needy happy. It is expected that the Prophet Ibrahim should be an example of how to be a true leader and we have to learn through getting rid of selfishness and practicing selflessness to become a great leader. Let’s move towards a great shine which is helping the poor.
